

**University  
of Idaho**

*Zoom participants: Please  
keep your microphone muted  
until the Q&A session*

# **DEVELOPING SUCCESSFUL PROJECT MANAGEMENT PLANS FOR LARGE PROPOSALS**

**RESEARCH AND FACULTY DEVELOPMENT  
FACULTY SUCCESS SEMINAR SERIES**

Kendra Mingo, MA, CRA

Senior Proposal Development Specialist

Office of Research and Faculty Development

*Please note that this session is being recorded*

# OFFICE OF RESEARCH AND FACULTY DEVELOPMENT

**I** We provide proposal development assistance across the spectrum\*

**I** Meet goals in the UI strategic plan – grow research and creative efforts across all disciplines

**I** Reach out to request service – [uidaho.edu/orfd](http://uidaho.edu/orfd)

\*Not including budget preparation

*All services are optional and are granted on a first come, first served basis*

# HELP US IMPROVE OUR SEMINARS

- I After the Q&A session: brief 3 question sli.do poll
- *On a scale from 1-5, how helpful was this seminar?*
  - *What did you like most about this seminar?*
  - *How can we improve this seminar?*

[www.slido.com](http://www.slido.com) or use the **sli.do** app (Use code #FSS)

# **FACULTY SUCCESS SEMINARS**

*Let Us Be Your Guide  
Through the Proposal  
Development Process*

**JOIN US IN IRIC 305  
12:30 P.M. – 1:30 P.M. PT**

Can't join us in person? Then join us live via Zoom:  
[uidaho.zoom.us/j/798224314](https://uidaho.zoom.us/j/798224314). Each seminar will  
be recorded and be available on our website.

**University of Idaho**  
Office of Research and  
Faculty Development

# OBJECTIVES

IN THIS SESSION, WE WILL DISCUSS:

- I Project Management Plans – definitions, organization
- I Introduce Collaboration Planning – connections to team science and large proposal development
- I Review Collaboration Plan components and considerations
- I Share tools and resources
- I Connect Collaboration Plans to Project Management Plans

# PROJECT MANAGEMENT PLANS

- I May vary widely by program type and funding agency
- I Makes a compelling case that a funded project will be consistently and carefully managed and will meet the sponsor's expectations
- I Demonstrates that PIs will function as effective and efficient stewards of an agency's research investment

Strategies for Planning,  
Developing, and Writing  
Large Team Grants

Mike Cronan

Cronan, Mike. [Strategies for Planning, Developing, and Writing Large Team Grants](#). College Station, TX: Academic Research Funding Strategies, LLC. (2013). 184 pp.

# PROJECT MANAGEMENT PLANS

**I** Administrative Core section or as a separate document - [Project Leadership Plans for Multiple PI Grant Applications](#)

**I** Purpose: Address administrative processes and PI responsibilities

- Program Roles and responsibilities
- Fiscal and management coordination
- Decision making process for scientific direction
- Allocation of resources
- Data sharing and communication
- Publication and intellectual property
- Procedures for resolving conflicts

**I** In Project Description or as separate Supplementary Document

**I** Purpose: Describes how project and collaborations will be managed

- Program Roles and responsibilities
- Project Management tasks
- Approaches to integrate research
- Communication & coordination mechanisms
- Project activities, milestones and timeline
- Data Management (*separate section*)

# PROJECT MANAGEMENT PLANS

How these are often constructed:

- I PI is the primary writer and architect
- I Developed along w/ other supplementary documents
- I Proposal guidelines used as a checklist

- Roles and responsibilities

- Project activities, milestones and timeline

- Often uses standard institutional language

Collaboration  
Planning  
Approach

# COLLABORATION PLANNING APPROACH

Hall K.L., Vogel A.L., Crowston K. (2019)

[Comprehensive Collaboration Plans: Practical Considerations Spanning Across Individual Collaborators to Institutional Supports.](#)

In: Hall K., Vogel A., Croyle R. (eds) Strategies for Team Science Success. Springer, Cham. 633 pp.

[https://doi.org/10.1007/978-3-030-20992-6\\_45](https://doi.org/10.1007/978-3-030-20992-6_45)

# COLLABORATION PLANNING APPROACH

## FRAMEWORK ORIGINS:

Office of Science and Technology  
Policy (OSTP)

Networking and Information  
Technology Research and  
Development (NITRD) Program

NITRD Subcommittee on Team  
Science (2014)

- I** Chapter authors were chairs or members of NITRD Subcommittee on Team Science
- I** Developed Collaboration Planning Framework with input from numerous federal agencies
- I** Potential use to enhance federal application process for team science grant initiatives

# COLLABORATION PLANNING

## WHAT, WHY:

- I Roadmap to facilitate effective team formation and functioning
- I Assess and enhance team readiness
- I Demonstrate effective team organization to funding agencies

# COLLABORATION PLANNING

WHAT, WHY:

Team Science – Unique costs related to management of large complex teams

Team Science – Potential to achieve complex and sophisticated research goals

Collaboration Plan – Presents roadmap for effective team functioning

# COLLABORATION PLANNING

WHAT, WHY:

Team  
Science

Internal facing - Project

Collaboration Planning  
Framework

External facing - Proposal

Project  
Management Plan

# HOW TO WRITE A COLLABORATION PLAN

COMPONENT	CONSIDERATIONS	COMPONENT	CONSIDERATIONS
<b>1 Rationale for Team Approach &amp; Configuration</b> <ul style="list-style-type: none"> <li>Justify why a team approach is necessary to meet the research objectives.</li> <li>Describe why the team configuration meets the proposed research objectives (e.g., how each team member uniquely contributes).</li> </ul>	<ul style="list-style-type: none"> <li>As the number of collaborators increases, so do the potential challenges.</li> <li>For interdisciplinary teams, the disciplines must be "scientifically ready" for collaboration.</li> <li>Not all research questions are best addressed using a team approach or require a large, complex, or distributed team.</li> <li>Generally, a team should not include more researchers than necessary, but should include sufficient breadth to gather the needed scientific expertise.</li> </ul>	<b>6 Leadership, Management, &amp; Administration</b> <ul style="list-style-type: none"> <li>Describe the leadership and management approaches that will be used to address the other components in the collaboration plan, given the specific team context that has been proposed (e.g., the individual team members, team characteristics, involved institutions and organizations).</li> </ul>	<ul style="list-style-type: none"> <li>There are numerous approaches to leadership (e.g., hierarchical, heterarchical, transformational, transactional). The most successful outcomes are produced by combining various approaches as appropriate to the context.</li> <li>Leadership and management are key influences on the success of a scientific collaboration.</li> <li>More complex team science initiatives require more sophisticated leadership and management approaches.</li> </ul>
<b>2 Collaboration Readiness</b> <ul style="list-style-type: none"> <li>Provide evidence for the collaboration readiness of (1) the individual researchers, (2) the team as a unit, and (3) the institutional and organizational context that are involved.</li> <li>A given project may not have high levels of collaboration readiness in all of these areas. A plan may highlight strengths and describe strategies to compensate for any weaknesses.</li> </ul>	<ul style="list-style-type: none"> <li>Individual characteristics may increase success (e.g., interdisciplinary or team orientation, preparation for complexities and tensions of collaboration).</li> <li>Team history of collaboration, especially teams with some former collaboration and some new members, may increase success.</li> <li>Institutional policies, procedures, resources, infrastructure may influence success (e.g., promotion and tenure policies, research development offices, training for team science).</li> </ul>	<b>7 Conflict Prevention &amp; Management</b> <ul style="list-style-type: none"> <li>Describe strategies and systems for preventing and managing conflicts (e.g., processes for inviting and sustaining diverse perspectives, preventing or managing negative forms of conflict, encouraging debate and facilitating productive forms of conflict, and resolving conflict).</li> <li>Many sources of team conflict can be anticipated, and strategies should be developed at the outset.</li> </ul>	<ul style="list-style-type: none"> <li>Demographic and disciplinary diversity both may lead to conflict, but the specific areas of conflict, and the ways in which conflicts play out, will vary with the unique combination of types of diversity on the team.</li> <li>Team members with similar training may underestimate the potential for conflict as a result of incorrect assumptions about areas of agreement.</li> <li>Subgroups may produce fault lines.</li> </ul>
<b>3 Technological Readiness</b> <ul style="list-style-type: none"> <li>Document the availability and planned use of technological resources to facilitate: <ul style="list-style-type: none"> <li>Data sharing and collaborative data analysis (e.g., data sharing agreements, common data analysis and management software).</li> <li>Communication (e.g., video, email, instant messaging, document tools) and</li> <li>Coordination (e.g., calendars, work flow or project management tools).</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>It includes 3 components: (1) technology must be available; (2) members must be willing to use the technologies; and (3) members must have the skills to use them.</li> <li>Additional issues may include compatibility and interoperability of systems across collaborators; decisions concerning whose systems or processes will be used.</li> </ul>	<b>8 Training</b> <ul style="list-style-type: none"> <li>Describe a training plan for team members at the start of the collaboration and throughout (e.g., training relevant to team processes, leadership, management, communication, coordination).</li> <li>For interdisciplinary (ID) teams, this plan should include cross-training in multiple scientific areas, and training in ID science competencies (e.g., critical awareness of the strengths and weaknesses of all disciplines, strategies for combining approaches from multiple disciplines).</li> </ul>	<ul style="list-style-type: none"> <li>On-going, rather than one-off, training is needed to maintain and build competencies and address evolving needs.</li> <li>Training should be designed to meet a wide variety of needs by career stage, learning style, interests, and practical constraints (e.g., web-based training for distributed teams).</li> <li>Evidence-based training approaches exist for both individuals and teams (e.g., team coordination training, team reflexivity training, cross training).</li> </ul>
<b>4 Team Functioning</b> <ul style="list-style-type: none"> <li>Describe strategies that will be used to address key team processes that are essential to effective team functioning.</li> <li>Examples of strategies include: development of cooperative agreements and operating manuals; participation in the <i>Toolbox Project</i> facilitated workshops (<a href="http://www.csls.utdallas.edu/toolbox/">http://www.csls.utdallas.edu/toolbox/</a>); and implementation of team diagnostic surveys for quality improvement.</li> </ul>	<ul style="list-style-type: none"> <li>Strategies should take into account the unique characteristics of the team and the scientific work, such as collaborative history, complexity of the team (e.g., size, diversity, dispersion, task interdependencies), phase of the research process.</li> <li>Strategies should be directly tied to achieving key team processes (e.g., generating a shared mission and goals, externalizing group cognition, creating shared mental models, generating shared language).</li> </ul>	<b>9 Quality Improvement Activities</b> <ul style="list-style-type: none"> <li>Describe what processes will be put in place to ensure continuous quality improvement specific to team functioning, in order to help: <ul style="list-style-type: none"> <li>address challenges as they emerge; and</li> <li>maintain and enhance the quality of the ongoing collaboration.</li> </ul> </li> </ul>	<ul style="list-style-type: none"> <li>Teams that engage in systematic and iterative reflection about team performance and subsequently adjust their team objectives and processes show better performance, including higher levels of innovation.</li> <li>For large or complex teams, it may be helpful to involve outside experts to design and implement quality improvement activities.</li> <li>Optimal range from frequent, brief opportunities for reflection about team performance (e.g., pre-briefing and debriefing) to more in-depth activities (e.g., surveys, facilitated discussions/workshops).</li> </ul>
<b>5 Communication &amp; Coordination</b> <ul style="list-style-type: none"> <li>Describe ways communication will occur (e.g., meeting frequency and modality).</li> <li>Describe strategies to coordinate day-to-day operations and the achievement of scholarly benchmarks (e.g., work flow, coordination of data).</li> </ul>	<ul style="list-style-type: none"> <li>Plans should be specific to your team. For example, distance collaborations increase potential communication and coordination challenges. Communication and coordination styles may vary among collaborators who vary in age, gender, and culture, and for collaborators from different disciplines.</li> <li>Greater use of coordinative mechanisms leads to more successful outcomes. Direct supervision and face-to-face mechanisms have demonstrated effectiveness. As team complexity and size increases, so does the need for more coordination.</li> </ul>	<b>10 Budget &amp; Resource Allocation</b> <ul style="list-style-type: none"> <li>Allocate funds in the budget for activities that facilitate the success of the team, as identified in components 1-8.</li> </ul>	<ul style="list-style-type: none"> <li>The prior 8 components all require investments of resources that require financial support. It is necessary to allocate funds to those activities to ensure their successful implementation.</li> <li>Clear but flexible plans for funds may produce optimal results. This can be particularly important in larger and more complex initiatives, where there is a greater likelihood for changes to the collaboration over the course of the initiative.</li> </ul>

# COLLABORATION PLANS

## TEN KEY COMPONENTS TO ADDRESS:

- 1) Rationale for Team Approach and Team Composition
- 2) Collaboration Readiness
- 3) Technological Readiness\*
- 4) Team Functioning
- 5) Communication and Coordination
- 6) Leadership, Management, and Administration
- 7) Conflict Prevention and Management
- 8) Training
- 9) Quality Improvement Activities
- 10) Budget/Resource Allocation

# 1) RATIONALE FOR TEAM APPROACH

## CONSIDERATIONS, TOOLS:

- I** Justify how a team approach, team size, and composition are required for scientific success, in light of complexity introduced by a large team.
- I** Answer these questions:
  - Why do the research questions and goals require a team approach?
  - Will the participating disciplines and fields be able to work together successfully to achieve the scientific objectives?
  - Why is this team size and expertise necessary to achieve the scientific goals?

# 2) COLLABORATION READINESS

## CONSIDERATIONS, TOOLS:

- I** Provide evidence for the collaboration readiness of individual investigators, the team as a unit, and the institutional partners.
- I** For each institution, identify indicators of readiness, highlight potential challenges, and describe plans to address challenges.
- I** Document institutional resources, infrastructure, and policies that support collaboration readiness.
- I** Tools to assess collaboration readiness:
  - [Team Diagnostics Survey](#) (Wageman & Hackman, Harvard University)
  - [Collaboration and Team Science: A Field Guide](#) (NIH NCI)

# 3) TECHNOLOGICAL READINESS

## CONSIDERATIONS, RESOURCES:

- I** Document the availability and planned use of technological resources to support both the scientific and collaborative process.
  
- I** UI resources to support scientific processes:
  - [Central Catalog of Research Computing Resources](#)
  - [Office of Technology Transfer](#)
  - [Growing Team Research Community](#) (IMCI, IBEST)
  
- I** Support for collaborative processes:
  - [Comparison of research networking tools](#)
  - Collaborative platforms (e.g., [HubZero](#), [Trellis](#))
  - [Distributed Science](#) - resources for science collaboration at a distance (UT Austin)

# 4) TEAM FUNCTIONING

## CONSIDERATIONS, STRATEGIES:

**I** Document strategies to be used to support and grow effective team functioning

**I** Strategies:

- **Creation of glossaries of key terms**, summaries of key concepts to promote cross disciplinary understanding
- **Creating shared vision, mission, and goals statements**
- **Visualizations of the scientific problem space**
- Face-to-face meetings and interactions (virtually or in person)
- Annual strategic planning/advisory board meetings
- Surveys to reflect on team effectiveness and efficiency
- Periodic assessment of Collaboration Plans

# 5) COMMUNICATION & COORDINATION

## CONSIDERATIONS, EXAMPLES:

- I** Describe potential challenges to and plans for effective team communication (e.g., frequency, modality, method)
- I** Describe strategies to coordinate day-to-day operations and approaches
- I** Tools:
  - [Toolbox Dialogue Initiative](#) (Michigan State University)
  - [TDI workshops](#)

# 6) LEADERSHIP & ADMINISTRATION

## CONSIDERATIONS, RESOURCES:

**I** Describes approaches used to **facilitate the other components of the plan**, as well as **strategies for managing administrative and financial support for the project** (e.g., recruitment, hiring, reporting, etc.)

**I** Things to consider:

- Leadership approaches (e.g., hierarchical, heterarchical, transactional, etc.)
- [Leader Integrative Capabilities](#) – skills and behaviors to bridge intellectual distance and enable knowledge sharing and integration

# 7) CONFLICT PREVENTION

## CONSIDERATIONS, EXAMPLES:

- I** Identify factors that may lead to conflict (e.g. data ownership, intellectual property rights, authorship order, etc.)
- I** Describe strategies **to prevent, manage, and resolve conflicts** at the individual, team, and institutional levels.
- I** Examples:
  - Onboarding letters ([Bennett et al., 2014](#))
  - Pre-collaboration agreement templates
  - Center-level [manuals of operations](#) (Team Science Toolkit)
  - Mediation Clinic Resources ([UI College of Law](#))

# 8) TRAINING

## CONSIDERATIONS, APPROACHES:

- I** Outline training strategies to enhance scientific collaboration and integrate knowledge across disciplines
- I** Tailor trainings to the needs and characteristics of the team
- I** Map training goals, skills, approaches, formats, and expectations
- I** Things to consider:
  - Pedagogical approaches (e.g., problem-based, team-based, metacognitive)
  - Workshops, mentoring, coursework, journal clubs, collaborative writing retreats
  - Online tutorials and certifications (e.g., COALESCE - [teamscience.net](https://teamscience.net))

# 9) QUALITY IMPROVEMENT

## CONSIDERATIONS, EXHIBITS, RESOURCES:

- I** Describe plans to facilitate reflection about team performance and how resulting information will be used for quality improvement
- I** Strategies and tools to assess team function:
  - Use outside facilitators, evaluators to design and implement formative and summative assessment strategies
  - [Team Diagnostic Survey](#)
  - [Collaboration Success Wizard](#) (UC Irvine)

# 10) BUDGET/RESOURCE ALLOCATION

## CONSIDERATIONS:

- I** Identify specific budget lines or items needed to support the activities included in the plan.

# PROJECT MANAGEMENT PLANS

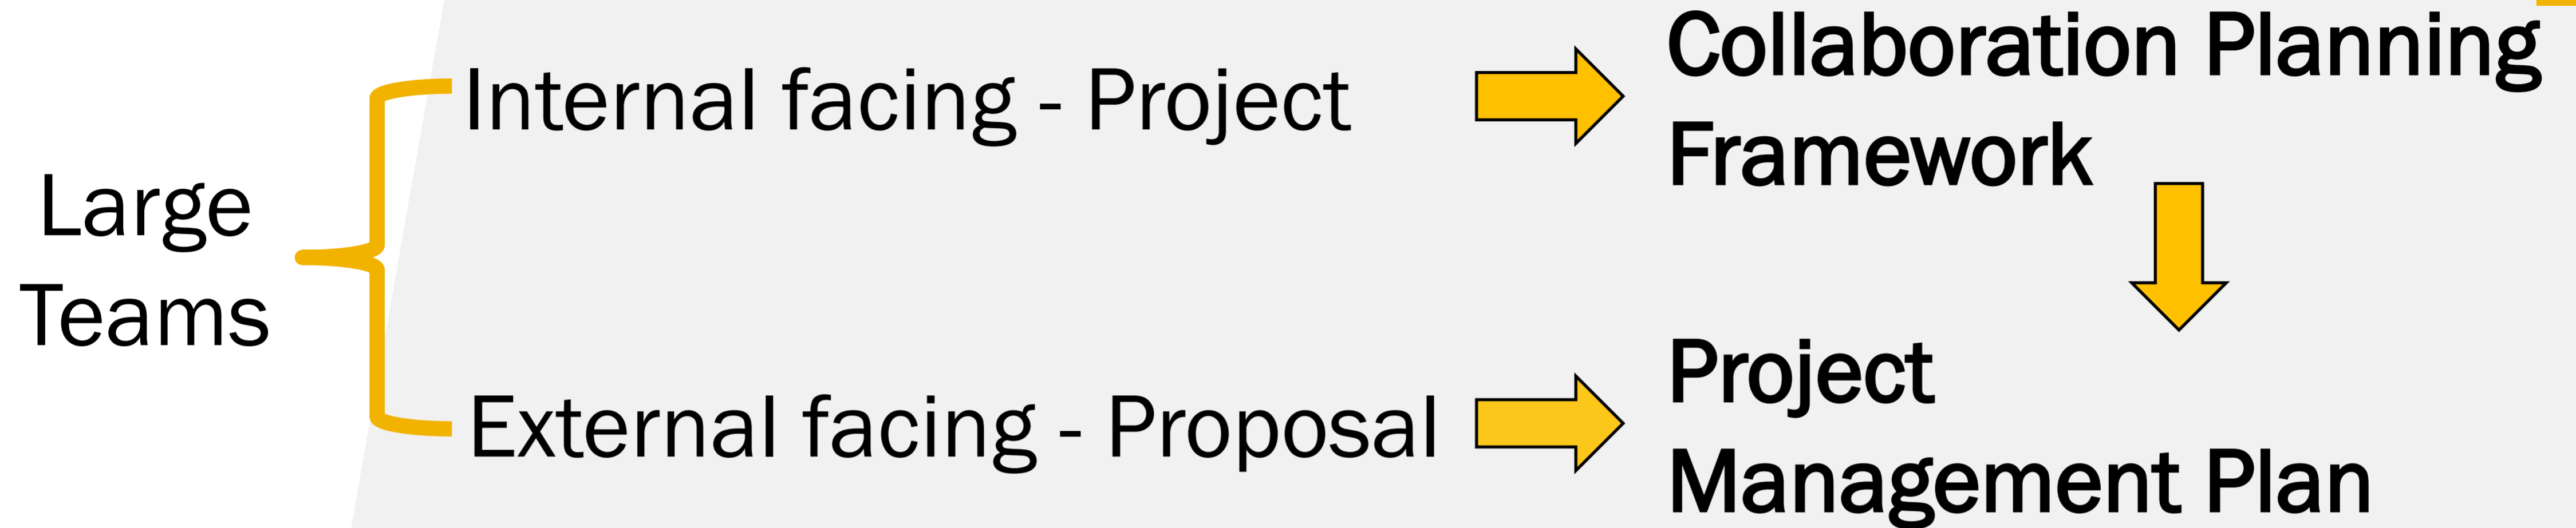

Use Collaboration Planning Approach to inform PMPs :

- I PI and team are architects and writers
- I Most useful if developed before the start of an initiative or in concert with proposal
- I PMP - subset of strategies from a more comprehensive Collaboration Plan
- I Proposal guidelines still used as a checklist

# TAKEAWAYS

- I** Collaboration Plans - Roadmap to effective team formation and functioning
- I** Project Management Plans - Present key points of more comprehensive Collaboration Plans for the funder
- I** May see elements of Collaboration Planning approach represented in federal team science grant initiatives

# RESOURCES

- I University of Idaho Growing Team Research Community ([IMCI](#), Slack channel)
- I International Network of the Science of Team Science ([INSciTS](#))
- I Comprehensive list of Collaborative Funding Mechanism ([NORDP](#))
- I Enhancing the Effectiveness of Team Science ([NRC, 2015](#))
- I Collaboration & Team Science: A Field Guide ([NIH, 2010](#))
- I COALESCE ([TeamScience.net](#))

# THANK YOU FOR COMING!

## *QUESTIONS?*

**BEFORE YOU GO...**

Please take a brief 3-question sli.do poll

[www.slido.com](http://www.slido.com) or use the **sli.do** app

Use code #FSS
