Trigonometry Review

## Trigonometric Functions

$$\begin{aligned}\sin \theta &= \frac{y}{h} & \csc \theta &= \frac{1}{\sin \theta} = \frac{h}{y} \\ \cos \theta &= \frac{x}{h} & \sec \theta &= \frac{1}{\cos \theta} = \frac{h}{x} \\ \tan \theta &= \frac{y}{x} & \cot \theta &= \frac{1}{\tan \theta} = \frac{x}{y}\end{aligned}$$

## Even-odd Properties

$$\begin{aligned}\sin(-x) &= -\sin x \\ \cos(-x) &= \cos x \\ \tan(-x) &= -\tan x\end{aligned}$$

## Pythagorean Identities

$$\begin{aligned}\sin^2 \theta + \cos^2 \theta &= 1 \\ 1 + \tan^2 \theta &= \sec^2 \theta \\ 1 + \cot^2 \theta &= \csc^2 \theta\end{aligned}$$

## Addition and Subtraction Formulas

“Sine crosses and keeps the sign, cosine does not cross and keeps no sign.”

$$\begin{aligned}\sin(x+y) &= \sin x \cos y + \cos x \sin y \\ \sin(x-y) &= \sin x \cos y - \cos x \sin y \\ \cos(x+y) &= \cos x \cos y - \sin x \sin y \\ \cos(x-y) &= \cos x \cos y + \sin x \sin y\end{aligned}$$

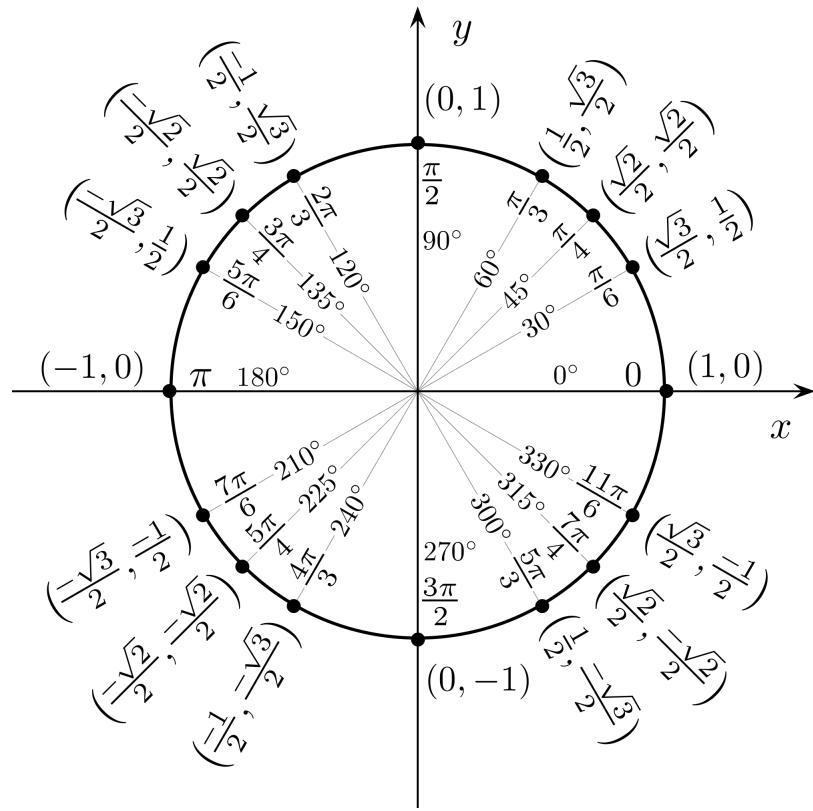

## Double-Angle Formulas

$$\begin{aligned}\sin(2x) &= 2 \sin x \cos x \\ \cos(2x) &= \cos^2 x - \sin^2 x \\ &= 2 \cos^2 x - 1 = 1 - 2 \sin^2 x \\ \tan(2x) &= \frac{2 \tan x}{1 - \tan^2 x}\end{aligned}$$

## Half-Angle Formulas

$$\begin{aligned}\sin^2 x &= \frac{1 - \cos(2x)}{2} \\ \cos^2 x &= \frac{1 + \cos(2x)}{2}\end{aligned}$$
